

### **Pitch:**

We create a solution that will keep people-data secure and private. Simultaneously, it will allow global payments, file sharing, audio/video calls and use of cloud services with quantum resistant 2048bits (AES-hybrid) encryption.

### **Details:**

1. Lokdon\$ or dollar: This an application that makes possible for filesharing, payment, plans for secure audio/video IM (currently secure SMS)
2. Lokdon Logistics: The is the website and applicaiton used for accepting and tracking parcels for shipping.
3. Lokdon SDK: The platform uses a 2048 bits encryption standard derived from AES. It also has many protocols the undermines trust, centralization and non-distribution of assets. SDK for integrate all into a technology following ABC path
  - a. Setup files for Mobile (IOS and Android) applications
  - b. Web applications
  - c. Browser plugin
  - d. Outlook add on
  - e. Software for integrating into enterprise and business

### **Features of our most valuable product (MVP):**

1. 2048 bits encrypted SMS / IM
3. Secure and local encryption of enterprise cloud aws contents through API
4. Secure and local encryption of enterprise cloud azure contents through API
5. Mobile payment system using Zero knowledge proof triangle flow (ZT-Flow) protocol
2. Secure individual cloud on the mobile device
6. Crowd funding for individual on the mobile device

### **Other areas of application:**

Blockchain (DLT), IoT, Financial, Health, Legal Firms, Education and retail industries need to protect themselves against many cyber threats while doing business. We provide the needed security and privacy as SDK, API and applications

e.g Lokdon\$. Trust less, confidence, ease of use by all including IT professionals; more so, enforceability and liability are retained in our product.

Unlike most competitors we have implemented privacy all the way in out method because of long experience in security we understand the standards and best practices. HIPPA, HITECH, GDPR, PCI-DSS, Anti-Mal/Ransomware and this could scale blockchain paving the way for inter operation of differing consensus as an option. All data will remain secure in the face of quantum computing. -Quantum immunity.
